EDUCATION

NATIONAL SENIOR CERTIFICATE

Advanced College

2021

ALX AFRICA SOFTWARE ENGINEERING

ALX Africa

2023-2025

SKILLS

Front-End: TypeScript, JavaScript, Tailwind CSS

GenAI & Agentic Systems: Python, TensorFlow, LLMs, LangChain

, CrewAI, Multi-Agent Frameworks, Advanced RAG, Prompt Engineering.

Data: Pandas, NumPy, Scikit-learn, Jupyter Notebook

Back-End: Node.js, REST APIs

Database infrastructure: PostgreSQL (SQL), MongoDB, Vector Databases, Relational Data Pipelines

Tools: Claude Code, Codex, Copilot, Git, GitHub, VS Code,

Docker, Render, OpenShift, Azure, AWS

CERTIFICATES

Machine Learning with Python

Deep Learning with Keras and

Tensorflow

Generative AI with Large Language

Models

FORTUNE MALAZA

AI & FULL STACK DEVELOPER

SUMMARY

Results-driven AI and Full-Stack Developer with 3+ years of experience building scalable applications, managing Azure/AWS cloud environments, optimizing data engineering pipelines, and executing projects in Agile team environments.

EXPERIENCE

AI ENGINEER

Project Y x Capaciti

2025 - Present

- Built and delivered scalable full-stack and data engineering solutions, applying modern architecture to solve real-world problems.
- Led Agile Scrum execution as a Scrum Master, successfully coordinating teams, running daily stand-ups, and ensuring efficient sprint delivery.

AI & FULL-STACK DEVELOPER

HeadsUP in partnership with Project Y x Capaciti

2026-Present

- Develop and maintain the core platform, including the WhatsApp bot, Node.js backend APIs, and React frontend.
- Integrate and manage WhatsApp Cloud API and AI-driven workflows, utilizing Claude Code and Codex to accelerate codebase scaling and feature deployment.
- Manage secure Docker and Render deployment pipelines, ensuring protected environment variables.

PROJECTS

Mzansi Law GPT

Technologies: Python, LangChain, CrewAI, Vector Databases, Retrieval-Augmented Generation (RAG)

- Engineered an AI-powered legal document analysis system using LangChain and CrewAI multi-agent frameworks to automate complex compliance parsing. Built specialized vector database ingestion pipelines to manage structured and unstructured South African legal data securely

Eye-Spend

Technologies: Python, Streamlit, LLMs, Pandas, OCR, Docker, OpenShift

- Built an AI-powered expense analysis and financial risk application utilizing OCR and LLMs to audit financial receipts and automatically classify anomalies and predict transactional risk profiles.
- Built reliable data pipelines and deployed containerized solutions via Docker and OpenShift.

SumAI

Technologies: Python, Groq, Gradio, Hugging Face Space, React, REST APIs

- Developed a next-generation news analysis web application featuring a highly interactive, futuristic user interface.
- Implemented server-side logic that scans, summarizes, maps emotional sentiment, and streams text-to-audio execution for users.

BudgetEase

Technologies: React, Tailwind CSS, Currency Exchange API, Node.js, Supabase

- Engineered a full-stack personal finance application designed to track expenses, monitor budgets, and manage custom savings goals.
- Architected and migrated a full-stack personal finance platform to a Supabase/PostgreSQL backend to execute complex relational queries, handle high-throughput structured data, and enforce secure session authentication.
- Utilized clean React patterns and hooks to build a responsive, user-friendly dashboard providing real-time data visibility.
